FAMAR AUTOMATIONS

A FAMARGROUP COMPANY

Basket Feeder integrated in a production line.

The innovative Basket Feeder made by Famar Automations is capable of feeding or receiving parts or act as a buffer between two machining operations.

This feeding system is specifically designed for managing stacks of wire baskets and/or trays. Furthermore Famar Automations supplies the Basket Feeder with the innovative Compressed Air Free technology that reduces consumption considerably and protects the environment.

Adding the Basket Feeder to a production line is quick, easy and safe since every feeder has a PLC that can use any kind of interface.

A display shows the message diagnostics as well as the manual functions.

Access door for changing the basket/tray stack trolley.

Additional doors up to 3 or 4 can be supplied and allow the feeding of different parts at the same time.

Basket positioned for loading or unloading from a robot or a gantry. Two or more loading or unloading areas can be supplied.

Famar Automations was established in 2004 and in 2012 moved in the modern factory shop in Sant'Ambrogio.

Our specialty is special feeding and automation systems that fit our customer's requests as well as integrate all standard robots into cells that can suit all feeding needs. We proudly manufacture 3 different types of conveyors for pallets and parts up to 500 kg each.

Famar Automations is a growing company investing in research and development of high technology always new automation systems.
